ANIMALS

DFTD (Devil Facial Tumor Disease) is a transmissible parastic cancer affecting Australia's Tasmanian Devil species.

DFTD has wiped out more than 90% of the devil population since its discovery in 1996.

The disease is spread primarily through biting.

No biting

TAZZIE, YOU CAN'T GO AROUND BITING OTHER TASMANIAN DEVILS.
they started it!

I DON'T CARE WHO STARTED IT.
YOU ARE NOT TO BITE ANOTHER DEVIL OR -
or what?!

OR YOU'LL GET FACE CANCER.

NOW BE ON YOUR WAY.
AND PLAY NICE.
